# Acknowledgements

The solutions provided by this report to the Weather data visualization – A Graphical User Interface (GUI) for weather radar and wind energy data visualization and analysis, has been developed by Mads Lundt ($s103439$), Matthias Larsen ($s103437$) and Joachim Jensen ($s103430$).

– Some work distribution perhaps?

# Abstract, Resumé

A platform to visualize different kind of weather data

# Contents

**Abstract** ii

**Contents** iii

**List of Figures** iv

**List of Tables** v

**List of Source code** vi

**1 Introduction** 1

**2 Related work** 2

**3 Body** 3

3.1 The C++ application . . . . . 3

3.1.1 Return codes . . . . . 3

**4 Conclusion** 4

**5 Future work** 5

**References** 6

**Appendix** 7

# List of Figures

# List of Tables

3.1 Return codes from the C++ application . . . . . 3

# Listings

# 1

# Introduction

# 2

# Related work

A GUI has been developed in Matlab..

A second attempt made use of Google Maps..

# 3 Body

## 3.1 The C++ application

### 3.1.1 Return codes

The C++ application returns the following codes to the PHP after processing data:

| Code | Meaning |
|---|---|
| 0 | Failure |
| 1 | Success |
| 2 | Success, unkown params ignored |
| 10 | Failed, missing fileid |
| 11 | Failed, missing filename |
| 12 | Failed, missing type |
| 20 | Unknown file type |
| 21 | File not found |
| 22 | Invalid file, or wrongly formatted |
| 30 | Could not read input file |
| 31 | Could not write to input file |
| 32 | Could not read output file |
| 33 | Could not write to output file |
| 34 | Could not delete output file |

**Table 3.1:** Return codes from the C++ application

# 4

# Conclusion

# 5

# Future work

The use of well developed and supported frameworks makes the application easy to extend to support new file formats.
